

# THE GREATEST INVENTION SINCE THE WHEEL.

## Rubberized asphalt: a silent, durable and sustainable technology for road making.

The addition of End-of-Life tyres recycled rubber to asphalt mixes allows a consistent reduction of the traffic noise and extend the lifetime of the road up to three times longer. Moreover, thanks to their outstanding resistance to crack propagation and permanent deformations, rubber modified asphalt mixes reduce the frequency of maintenance and repair. To date, over 440 km in Italy are quieter and safer for everyone.
